Hi Ellen,

No, it's not a problem, just did not want to signal an expanded scope of work to the committee. But I think you are right, the context makes sense.

Thanks for the official statement of task. I think your website list went quite far...I got a lot of inquiries. I think colleagues on BEST will also share with their stakeholders. I sent it to our interagency colleagues as well. So, let's each use our groups and send to whomever we can think of – I have a feeling this will move like wildfire, anyway ☺.

This is good news about the Chinese interest. Hard enough getting traction here in the US!!!

Have a great Thanksgiving weekend.

Tina

**Importance:** High

Hi Tina,

I think that you already spoke with Teresa about this issue, but I thought that we had decided that both reports were important to mention. Because the IRIS report simply built on the Formaldehyde report, I hope it's not a problem to mention both, particularly since all conversations tend to lead back to Chapter 7 of the formaldehyde report.

I have attached the "official" statement of task for the IRIS Workshop Committee. Regarding dissemination, we have already sent a "Save the Date" email to the BEST Listserv. Are there other stakeholders that you would like us to contact? Any help with identifying groups would be helpful. Please feel free to forward our "Save the Date" email to anyone you think should be contacted. If people have comments or questions, they can send them to Jessica.

On another note, I heard from National Academies Press that they received an offer to translate *Using 21st Century Science to Improve Risk-Related Evaluations* into Chinese. They are working out the details but hope to translate and produce the book in about 18 months.

Ellen

**Subject:** my memory

Hi Ellen,

My memory might be foggy – but I thought, you in particular, wanted the focus to be on the 2014 NRC report moving forward. This seems to go back to the FA report – I am sure we can manage, but I was surprised and wanted to double check with you.

Tina

At the request of the US Environmental Protection Agency (EPA), this committee will assess changes that have been implemented (or plan to be implemented) by EPA in response to recommendations made in previous National Academies reports, such as *Review of EPA's Integrated Risk Information System (IRIS) Process* and *Review of the Environmental Protection Agency's Draft IRIS Assessment of Formaldehyde*.

**Subject:** Just FYI - IRIS Workshop

**Importance:** High

The announcement is now on the BEST website (<http://dels.nas.edu/best>). If you click on the workshop announcement, it takes you to a page that provides information and the opportunity to register.

Ellen
